

paytestprobe

PaytestProbe serves as the pivotal link between a terminal and an EMV L3 Test Tool, facilitating the seamless flow of transactions, as an additional option to cards, enhancing the capacity to conduct comprehensive testing scenarios. This integration simplifies and streamlines the testing process, facilitating businesses to efficiently perform tests, ultimately reducing both testing time and associated costs.

Use PaytestProbe manually as a standalone device connected to an EMV L3 Test Tool to enhance your current testing processes or as a part of a fully automated solution, exponentially improving your testing capabilities.

Key Features

Comprehensive Testing Scenarios

PaytestProbe covers a wide range of payment interfaces including EMV chip, magnetic stripe and contactless, supporting both online and offline testing scenarios, and enabling businesses to simulate various real-world situations.

PaytestRobot Compatibility

Employ PaytestProbe independently as a standalone device linked to an EMV L3 Test Tool, either to elevate your existing testing procedures or integrate it into a comprehensive automated solution, significantly enhancing your testing capabilities.

Start your journey to full payment software automated testing, armed with the reliability and ease that PaytestProbe delivers.
